

Doctor Butler's Advanced Hemorrhoid Pain & Protection Kit

The products in this box are meant to be used together to reduce immediate swelling and pain and to protect sensitive hemorrhoid sites as you heal. The goal is to soothe symptoms and put you on the path towards long term healing. Do that by using our Advanced Protection & Prevention Formula ointment on hemorrhoids along the anal canal and the Hemorrhoid Treatment Spray on swollen, protruding hemorrhoids. These products complement each other with different active ingredients and can be used at the same time to treat recurring hemorrhoids.

How often do I treat and for how long?

This kit is designed to be used three times a day over a two week period. Follow the steps below to treat your hemorrhoids (1) when you wake up in the morning, (2) after your first bowel movement, and (3) again before bedtime.

How to use

Step 1: Clean the affected area with mild soap and warm water and wash hands thoroughly.

Step 2: Using an included finger cot (if you wish), apply ointment to anal canal. Do not insert finger more than two inches. Discard finger cot and wash hands thoroughly.

Step 3: Spray the rectal area until thoroughly moist. Wipe off excess with tissue.

If after two weeks of treatment you are still experiencing symptoms, schedule an appointment with your doctor. Your case may be too advanced for at-home treatment.
